Art Unit: 2617

DETAILED ACTION

I. The Art Unit location of this application in the USPTO has changed. To aid in correlating any papers for this application, all further correspondence regarding this application should be directed to Art Unit 2617.

II. The current office-action is in response to the amendment filed on 04/12/2006.

Accordingly, Claims 4 and 13 are cancelled and Claims 1-3, 5-12 and 14-18 are pending for further examination as follows:

Claim Rejections - 35 USC § 103

- III. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- IV. Claims 1, 5, 7, 9-10, 14, 17-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Houlihan (US 5467324) in view of Hayes et al. (US 5892483).

Regarding Claim 1, Houlihan disclosed a body-worn personal communications apparatus (Abstract, 100; Fig.1; Col.3; 1-12), comprising:

A transceiver connected to said physically-shortened electric antenna (Col.3; 41-51 and Claim 1);

A microphone (132; Fig.1) connected to said transceiver; (Col.3; 31-40) and A casing, wherein said transceiver is disposed within said casing, (Abstract, 100; Fig.1; Col.2; 51-67, Col.3; 1-12)

Wherein microphone (332; fig.9) is mounted on said physically-shortened electric antenna (Col.1; 67–Col.2; 5 and Col.5; 28-32)

Wherein said physically-shortened electric antenna and said microphone are mounted transversely to a plane through said casing. (236; Fig.6, Col.4; 39-44)

Houlihan fails to disclose a physically-shortened electric antenna that is physically shorter than its electrical length and wherein said physically-shortened electric antenna is inaccessible to user. However, Hayes teaches in an analogous art, that a physically-shortened electric antenna that is physically shorter than its electrical length (electrical length is greater than physical length; Col.4; 39-46 and 55-64 and Col.1; 52-61).

Wherein said physically-shortened electric antenna is inaccessible to user. (14; Fig.3, e.g. printed circuit antenna is located inside the housing which is inaccessible to user; Col.3; 63-Col.4; 4) Therefore, it would have been obvious to one of ordinary skill in the art at the time of invention to modify Houlihan including a physically-shortened electric antenna that is physically shorter than its electrical length and wherein said physically-shortened electric antenna is inaccessible to user in order to improve miniaturization.

Regarding Claim 5, Houlihan disclosed the apparatus of claim 1, wherein said microphone is located at an end of said physically-shortened electric antenna furthest from said casing. (332; fig.9; Col.5; 28-32)

Page 4

Regarding Claim 7, Houlihan (5,467,324) disclosed The apparatus of claim 5, wherein said physically-shortened electric antenna is formed from a hollow wire, wherein a first electrical connection between said microphone and said transceiver is provided by said hollow wire, and wherein a second electrical connection between said microphone and said transceiver is provided by a conductor enclosed by said hollow wire. (Col.3; 41-51)

Regarding Claim 9, Houlihan disclosed the apparatus of claim 5, wherein said microphone provides a top loading to said physically-shortened electric antenna. (332; fig.9; Col.5; 28-32)

Regarding Claim 10, Houlihan disclosed a body-worn personal communications apparatus (Abstract, 100; Fig.1; Col.3; 1-12), comprising:

A casing; (Abstract, 100; Fig.1; Col.2; 51-67, Col.3; 1-12) and

A physically-shortened electric mounted transversely to a plane through said casing. (236; Fig.6, Col.4; 39-44)

Houlihan fails to disclose wherein the physically-shortened electric antenna that is physically shorter than its electrical length and wherein said physically-shortened electric antenna is inaccessible to user. However, Hayes teaches in an analogous art, that wherein the

Art Unit: 2617

physically-shortened electric antenna that is physically shorter than its electrical length (electrical length is greater than physical length; Col.4; 39-46 and 55-64 and Col.1; 52-61); Wherein said physically-shortened electric antenna is inaccessible to user. (14; Fig.3, e.g. printed circuit antenna is located inside the housing which is inaccessible to user; Col.3; 63-Col.4; 4)

Regarding Claim 14, Houlihan disclosed the apparatus of claim 10, wherein said microphone is located at an end of said physically-shortened electric antenna furthest from said casing. (332; fig.9; Col.5; 28-32)

Regarding Claim 17, Houlihan (5,467,324) disclosed The apparatus of claim 10, wherein said physically-shortened electric antenna is formed from a hollow wire, wherein a first electrical connection between said microphone and said transceiver is provided by said hollow wire, and wherein a second electrical connection between said microphone and said transceiver is provided by a conductor enclosed by said hollow wire. (Col.3; 41-51)

Regarding Claim 18, Houlihan disclosed the apparatus of claim 10, wherein said microphone provides a top loading to said physically-shortened electric antenna. (332; fig.9; Col.5; 28-32)

V. Claims 3, 12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Houlihan and Hayes further in view of Hirai et al. (US 6429829).

Regarding Claim 3, the above combination disclosed all the particulars of the claim except a meander-line antenna. However, Hirai teaches in an analogous art, that the apparatus of claim 1, wherein said physically shortened electric antenna is a meander-line antenna. (16; Fig.1; Col.3; 11-17). Therefore, it would have been obvious to one of ordinary skill in the art at the time of invention to modify Houlihan and Hayes including a meander-line antenna in order to minimize the space required for the antenna.

Regarding Claim 12, the above combination disclosed all the particulars of the claim except a meander-line antenna. However, Hirai teaches in an analogous art, that the apparatus of claim 10, wherein said physically shortened electric antenna is a meander-line antenna. (16; Fig.1; Col.3; 11-17). Therefore, it would have been obvious to one of ordinary skill in the art at the time of invention to modify Houlihan and Hayes including a meander-line antenna in order to minimize the space required for the antenna.

VI. Claims 2, 6, 8, 11, 15-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Houlihan and Hayes further in view of McLean (GB 2036447).

Regarding Claim 2, Houlihan disclosed a body-worn personal communications apparatus (Abstract, 100; Fig.1; Col.3; 1-12), comprising:

A casing; (Abstract, 100; Fig.1; Col.2; 51-67, Col.3; 1-12) and

A physically-shortened electric mounted transversely to a plane through said casing. (236; Fig.6, Col.4; 39-44)

Art Unit: 2617

Houlihan fails to disclose wherein the physically-shortened electric antenna that is physically shorter than its electrical length and wherein said physically-shortened electric antenna is inaccessible to user. However, Hayes teaches in an analogous art, that wherein the physically-shortened electric antenna that is physically shorter than its electrical length (electrical length is greater than physical length; Col.4; 39-46 and 55-64 and Col.1; 52-61); wherein said physically-shortened electric antenna is inaccessible to user. (14; Fig.3, e.g. *printed circuit antenna is located inside the housing which is inaccessible to user*; Col.3; 63-Col.4; 4)

The above combination disclosed all the particulars of the claim except wherein said physically shortened electric antenna is a helical antenna. However, McLean teaches in an analogous art, that the apparatus of claim 1, wherein said physically shortened electric antenna is a helical antenna. (Page.2; 1-6) Therefore, it would have been obvious to one of ordinary skill in the art at the time of invention to modify Houlihan and Hayes including wherein said physically shortened electric antenna is a helical antenna in order to use the thickness of cable.

Regarding Claim 6, the above combination disclosed all the particulars of the claim except the coaxial cable. However, McLean teaches in an analogous art, that The apparatus of claim 5, wherein said physically shortened electric antenna is formed from a coaxial cable that provides electrical connections between said microphone and said transceiver. (Page.2; 45-59)

Regarding Claim 8, the above combination disclosed all the particulars of the claim except the coaxial cable. However, McLean teaches in an analogous art, that The apparatus of claim 6, wherein said microphone provides a low impedance at radio frequencies to thereby

Art Unit: 2617

enable said coaxial cable forming said physically-shortened electric antenna to act as an inductive stub. (Page.2; 45-64)

Regarding Claim 11, the above combination disclosed all the particulars of the claim except wherein said physically shortened electric antenna is a helical antenna. However, McLean teaches in an analogous art, that apparatus of claim 10, wherein said physically shortened electric antenna is a helical antenna. (Page.2; 1-6)

Regarding Claim 15, the above combination disclosed all the particulars of the claim except the coaxial cable. However, McLean teaches in an analogous art, that The apparatus of claim 10, further comprising: a transceiver, wherein said physically-shortened electric antenna is formed from a coaxial cable that provides electrical connections between said microphone and said transceiver. (Page.2; 45-59)

Regarding Claim 16, the above combination disclosed all the particulars of the claim except the coaxial cable. However, McLean teaches in an analogous art, that The apparatus of claim 15, wherein said microphone provides a low impedance at radio frequencies to thereby enable said coaxial cable forming said physically-shortened electric antenna to act as an inductive stub. (Page.2; 45-59)

Response to Amendments & Arguments

VII. Applicant's arguments with respect to claims 1-3, 5-12 and 14-18 have been fully considered but are most in view of the new ground(s) of rejection.

Conclusion

VIII. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a). A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

IX. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Sharad Rampuria whose telephone number is (571) 272-7870. The examiner can normally be reached on M-F. (8:30-5).

Application/Control Number: 09/616,635 Page 10

Art Unit: 2617

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, George Eng can be reached on (571) 272-7495. The fax phone number for the organization where this application or proceeding is assigned is (571) 273-8300.
